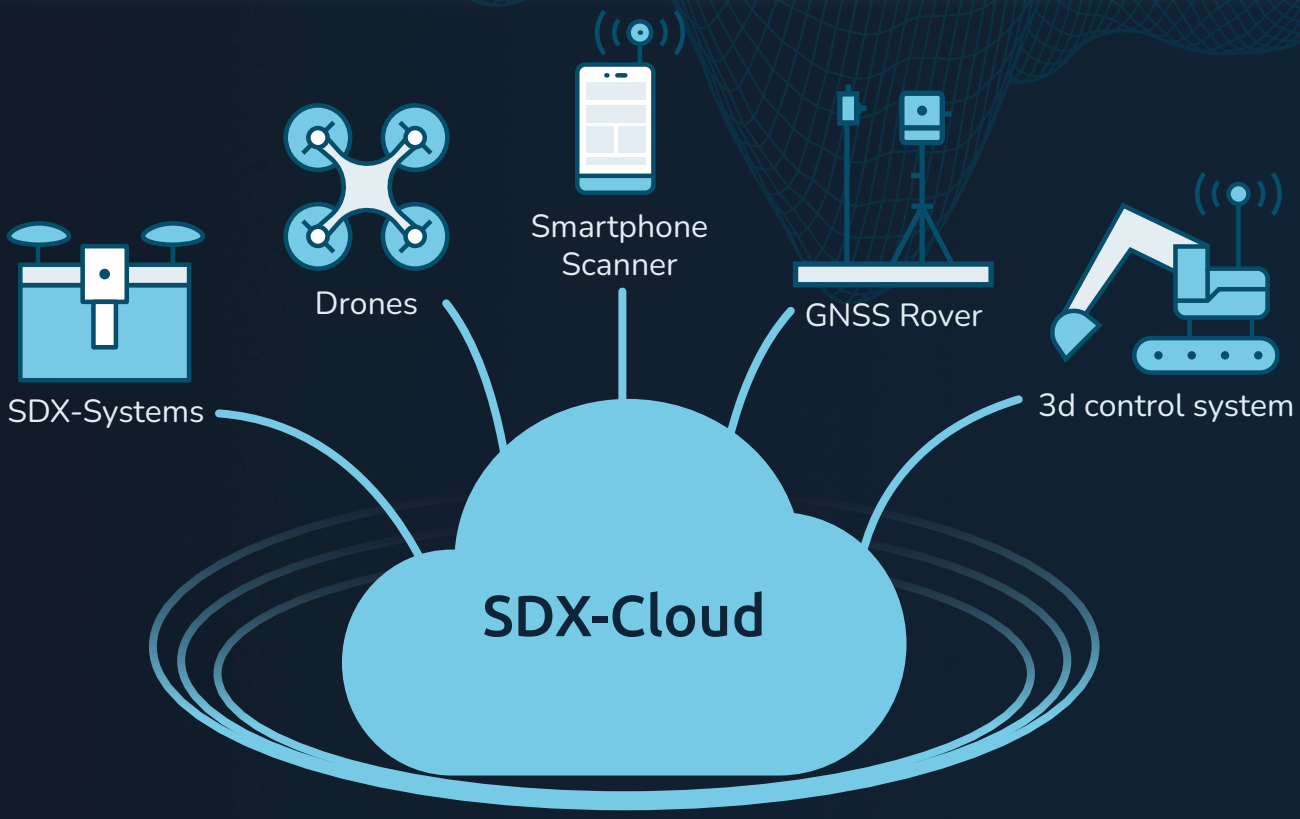
SDX-Cloud

Transform your scans into usable data in seconds. SDX-Cloud creates a central platform for your digital construcion site documentation.



Your technology.
Perfectly complemented.

SDX-Cloud ensures smooth integration and combination of all different surveying technologies. All data is converted directly into structured, digital documentation.

Head of Aggregates Operations

"Sodex Innovations' software has transformed the way we work. Our teams have found it intuitive and easy to use. It has significantly reduced our admin time while providing instant access to live data, giving us real-time visibility across multiple sites. It ticks all the boxes for us!"

Sodex Innovations

who we are

Since 2021, Sodex Innovations, an Austrian company, has been developing smart surveying systems that make everyday construction site work more efficient by automating and digitizing surveying - for immediate and accurate insights into your project.

measure

Accurately quantify distances, areas, volumes, and elevations directly from high-resulution point clouds.

compare

Automatically detect and visualize differences between terrain states or compare against design surfaces to track progress or deviations.

inspect

Visually analyze terrain conditions and surface details to identify changes, issues, or irregularities.

document

Create and export comprehensive visual and metric reports for project tracking, handovers, or compliance.

decide

Use dashboards and analytics to make informed operational decisions based on real-time site data and key performance metrics.
